Store Closing Procedure

A step-by-step operational workflow for end-of-day store closure

Department: Store Operations

Audience: New LSAs and ASMs

Purpose: This document explains the process for completing end-of-day closing procedures, including cash handling, reporting, documentation, and securing the building.

Prerequisites: Store must be closed, all customers must have exited, and closing employee must have required access. The safe and your till can be counted before closing the store, but the remaining steps must be completed after closing.

Required Materials and Access: Safe Access, Alarm Code, Store Keys, and Reports.

If required materials or access codes are unavailable, contact the **store manager, ASM, or LSA** for assistance.

Step 1: Code all registers

- Cashiers can do this after the last customer has been checked out.
- Once logged in on the till, press **9** followed by **Code**.
- Bring all the tills into the office.

Step 2: Count down tills and make cash lifts

- Count down all tills using the money counter.
- Write down the amounts of all tills and cash lifts on the daily safe and till sheet.

Note: Each till has its own slot.

- Do any cash lifts in the Smartsafe by inputting the drawer number four times as the login.

Note: Drawer numbers are located on the actual tills.

Step 3: Physically count the safe

- Count all the cash using the money counter and physically count the coins.
- Write the amount on the daily safe and till sheet.

Note: The daily safe count is directly above the till counts for the day.

Step 4: Print out end of day report

- Log into the **Smartsafe** using your numbers.
- On the right side, select **Reports**.
- Select **End of day**.
- Select **This Business Day** to print the report.

Step 5: Input tills into computer

- Log into the computer using your username and password.
- The store hub will load automatically.

Note: The tills will be on the far right of the screen and labeled.

- Plug all the till information into the correct drawer on the computer.

Step 6: Create safebag

- At the top of the screen, select the tab labeled **Safe**.
- Then select **Safebag**.
- Add up all the cash lifts for the day and enter that number into the amount box.
- Use the date as the label for the safebag.
- Make sure the amount is correct.
- **Select Save** and then close out the window.

Important: Verify that the safebag amount is correct before the next step! Once it is deposited, it cannot be corrected.

Step 7: Finalize safebag

- Under the same tab, locate **Safebag Maintenance**.
- Select the tab and find the safebag you just created and check the box.
- Select **Deposit** and use the date as the label for the deposit.
- Select **Save**.

Step 8: Print out sales report

- Select the **Reports** tab at the top of the screen.
- Select **Sales Report**.
- Select **View** and then **Print**.
- If there are any tax exempts, staple them to the top right corner of the report.

Note: The tax exempts are placed to the left of the desk with a clip labeled Tax Exempt.

Step 9: Fill out end of day checklist

- Complete the checklist by verifying each item.
- Fill out the appropriate written responses to the safe count, end of day cashlift, and cashier differences.

Note: The cashier differences are at the bottom of the last page of the sales report.

- Document any differences greater than \$15. If none, just write N/A.
- Verify that the end of day report matches the amount you put in for the safe bag.
- Sign the daily checklist and staple the end of day report in the space provided.

Step 10: Place paperwork in daily administration folder

Note: The folder is in the top-left drawer on the desk.

- The checklist goes into the daily checklist tab.
- The sales report is under tax exempt.
- Place the folder back into the drawer.

Step 11: Closing the store in the computer

- Select the **Administration** tab.
- Select **Close store**.
- Select **Next** and then input the safe amount in the box that pops up.
- Select **Next** until the **Finalize** button appears.
- Select **Finalize** and then close the window.
- Log out of the computer.

Step 12: Clock out, set the alarm, and go home

- Verify all employees have clocked out before arming the alarm.
- Go to the alarm in the office, and have everyone stand still.
- When the system indicates it is ready to arm, enter your code and have everyone exit the building.
- Lock the outer exit door with your key and make sure it's locked.

Troubleshooting

Issue: No safe access

Resolution: Contact store manager, ASM, or LSA.

Issue: Employee does not know their alarm code

Resolution:

- Attempt the last four digits of the employee's phone number.
- If unsuccessful, contact the store manager, ASM, or LSA.

Issue: Safebag amount does not match cash lift totals

Resolution:

- Verify all cash lifts were entered correctly.
- Recheck till counts and safe count amounts.
- Contact the store manager or ASM if the discrepancy cannot be resolved.
